

Shubham Kumar Chaudhary

Full Stack Developer

Summary:

I am a Junior Laravel Developer with approximately 1 year+ of hands-on experience developing web applications using PHP and the Laravel framework. I have a solid understanding of MVC architecture, basic MySQL database operations, and implementing CRUD functionality. My experience includes working with forms, server-side validation, authentication features, and integrating frontend templates with backend logic. I am familiar with Git for version control and continuously learning Laravel best practices to enhance my development skills.

Education:

Bachelor's in Information Management (BIM)

2021-2025

Himalaya Darshan College (Tribhuvan University)

Relevant Courses

Web Development, Database Management System, Software Engineering, Data Communication and Networking, E-Commerce, Information System, Business Mathematics, Business Statistics, Financial Accounting.

Skills:

Basic proficiency in **PHP** and the **Laravel framework**, with hands-on experience developing small to medium web applications by following the **MVC architecture** and Laravel coding conventions. Familiar with working on routes, controllers, views, and understanding the basic request–response lifecycle in Laravel.

Experience building **CRUD-based modules**, handling form submissions, applying server-side validation, and managing user input securely using Laravel's built-in features.

Working knowledge of **MySQL**, including creating databases, tables, and writing basic SQL queries for data insertion, retrieval, update, and deletion. Basic exposure to database structure design, with introductory knowledge of MS Access.

Familiar with frontend–backend integration using **HTML5**, **CSS3**, **JavaScript**, and the Blade templating engine, including creating dynamic views, handling forms, and displaying database-driven content.

Comfortable using common development tools such as **VS Code**, **Git** and **GitHub** for version control, and **XAMPP** for local development and testing, and **FileZilla** for managing website files via **FTP**.

Possess good **problem-solving and learning abilities**, with a strong willingness to improve technical skills and adapt to new concepts while working independently or as part of a team.

Projects:

1. Passion Chasers

<https://passionchasers.com.np>

- Designed and developed the official office website of **Passion Chasers Pvt.ltd** to provide detailed information about the company **profile**, **services**, **facilities**, and **team members** in a structured and user-friendly manner.
- Implemented dynamic sections for **vacancy announcements**, allowing administrators to post job openings with descriptions and requirements.
- Developed an **online job application** module where applicants can submit their details and apply for available vacancies through web-based forms.
- Integrated **form validation and database storage** to securely manage applicant information.
- Focused on clean UI and smooth user interaction using **HTML**, **CSS**, **JavaScript**, and **Laravel Blade templates**.
- Utilized **PHP**, **Laravel**, and **MySQL** for backend development and data management, with **Git** for version control during development.

2. Hotel Management System

<https://hms.passionchasers.com.np>

- Designed and developed a **Hotel Management System** to manage core hotel operations, including **room listings, reservations, customer registration, and booking management**.
- Implemented **room reservation** and **availability tracking**, allowing staff to create, view, and manage bookings efficiently.
- Developed modules for **restaurant orders** and **room services**, including support for **walk-in customers** and order tracking.
- Built a **checkout** and **billing system** that calculates the **final payable amount**, including room charges and unpaid restaurant or service charges.
- Used **SQL** to write **JOINS**, aggregate queries (**SUM, COUNT**), and subqueries for availability checks, along with **INSERT/UPDATE** operations to manage reservations and ensure data consistency.

3. Medi-Health

<https://github.com/shubhamchaudhary81/MediHealth.git>

- Developed **MediHealth** as college project, a healthcare web application for managing **patient appointments, medical reports, and medical history** in a centralized system.
- Implemented a **multi-hospital appointment booking system**, allowing hospitals across the country to join the platform and provide appointment services.
- Built modules to manage **doctor profiles** and **schedules**, including support for doctors working in **multiple hospitals** with different availability.
- Integrated **PHPMailer** for email notifications such as appointment confirmations, updates, and communication between patients, hospitals, and doctors, using **PHP, MySQL**.

Experience:

Jan 2025 – Present

Junior Web Developer | Passion Chasers Pvt. Ltd.

- Developed and maintained web applications using **PHP, Laravel, MySQL, HTML5, CSS3, Tailwind**, and basic **JavaScript**.
- Worked on **MVC-based application structure**, including routes, controllers, views, and form handling.
- Implemented **CRUD operations, server-side validation**, and database management for dynamic web features.
- Assisted in **testing, debugging, and updating web application features**, ensuring proper functionality and smooth user experience.
- Collaborated with team members on ongoing projects and used **Git/GitHub** for version control and code management.
